

Claim Amendments:

1. (Currently amended) A method for producing a fine, highly crystalline material product, the method comprising fluid energy milling a crystalline material using a milling fluid comprising helium gas, wherein the temperature of the milling fluid is between -30°C and -120°C .
2. (Currently amended) The method according to claim 1 wherein the milling fluid consists of helium gas.
3. (Cancelled)
4. (Previously presented) The method according to claim 1, wherein the temperature of the milling fluid is between -50°C and -70°C .
5. (Previously presented) The method according to claim 1, wherein the crystalline material comprises a medicament powder.
6. (Previously presented) The method according to claim 5, wherein the crystalline material is triamcinolone acetonide.
7. (Previously presented) The method according to claim 1, wherein the product has an amorphous content of less than 5%.
8. (Previously presented) The method according to claim 7, wherein the product has an amorphous content of less than 2%.
9. (Previously presented) The method according to claim 8, wherein the product has an amorphous content of less than 1%.
10. (Previously presented) The method according to claim 1, wherein the product comprises a medicament powder in a form suitable for inhalation.

11. (Previously presented) The method according to claim 10, wherein the product has a median particle size of less than 10 microns.
12. (Original) A crystalline material containing substantially no amorphous content and having a median particle size of less than 2 microns.
13. (Previously presented) The crystalline material according to claim 12 having a median particle size of about 1 micron.
14. (Previously presented) The crystalline material according to claim 12 which is triamcinolone acetonide.
15. (Previously presented) The crystalline material produced by a method according to claim 1.
16. (Previously presented) The crystalline material according to claim 15 containing substantially no amorphous content and having a median particle size of less than 2 microns.
17. (Previously presented) The crystalline material according to claim 12, wherein the amorphous content is less than 5%.
18. (Previously presented) The crystalline material according to claim 13, wherein the amorphous content is less than 5%.
19. (Previously presented) The crystalline material according to claim 17, wherein the amorphous content is less than 2%.
20. (Previously presented) The crystalline material according to claim 17, wherein the amorphous content is less than 1%.
21. (Previously presented) The crystalline material according to claim 18, wherein the amorphous content is less than 2%.

22. (Previously presented) The crystalline material according to claim 18, wherein the amorphous content is less than 1%.
